

CYBERNETIC SABOTAGE

Mission Briefing

FROM: Triny, Systems Handler

TO: New Investigator

Welcome to the team, Detective. We've had a string of incidents involving our robot fleet, and I need someone sharp with a database to help me get to the bottom of it. You'll be working directly against our live case files, writing real queries to pull the evidence we need. I will be with you at every step. Let's get started.

Your Mission

You will work through a series of cases, one at a time. Each one gives you a short briefing, like the one above, describing what evidence I need. Your job is to write the SQL query that retrieves it.

There's no way to skip ahead and see what's coming. Each case only unlocks once you've cracked the one before it.

If You Get Stuck

You are not expected to know the answer right away. If you are stuck, hints are available in three stages:

1. **A nudge** – a plain-language translation of what the case is actually asking for.
2. **A shape** – the structure of the query, without the exact details filled in.
3. **A scaffold** – a near-complete query with one or two things left for you to work out.

Hints cost a small number of points, so it's worth taking a real shot at each case before asking for one. But using a hint is always better than staying stuck. That's what I am here for.

How You're Scored

You will see a running score and timer as you work. Score comes from solving each case, with a small deduction for hints used along the way. This isn't about speed. It's about getting to a correct, working query.

Getting In

Ask your instructor for your access link and login details. Once you're in, just follow my lead. I will walk you through the first case myself.

Good luck, Detective. The system is counting on you.
